

What is Unified Bill & Chargeslip?

Unified Bill & Charge Slip (UBC) is a tool that enables you to send not only a digital invoice but also a unified charge slip for the corresponding transaction in just a single click.

How does it work?

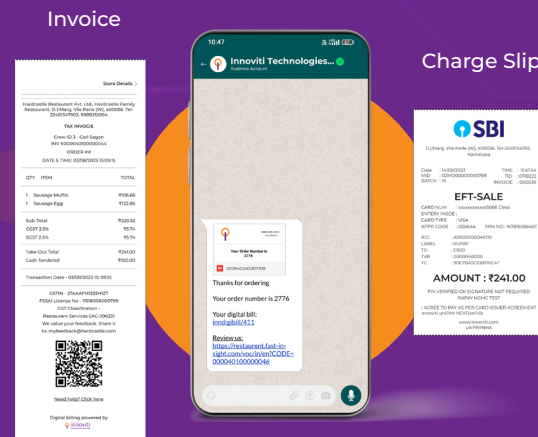

UBC uses Innoviti's patented technology to combine the data of an invoice and its payment charge-slip data into a unified bill + charge-slip, that is then sent over an SMS or WhatsApp channel.

STEP 1

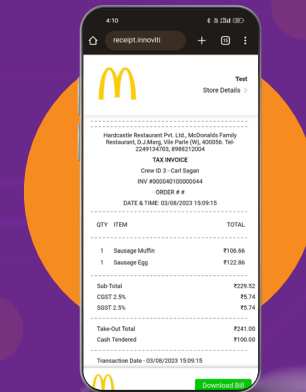

Integration
with Billing POS

STEP 2

Customer gets a message
having link to Bill + Chargeslip

STEP 3

Unified view of
Bill + Chargeslip

How to integrate UBC into your billing software?

UBC self-integrates with any billing software without any coding required from your billing vendor. Just install and start using it.

Case Study

Customer Persona

Large format retailer printing hundreds of invoices everyday

Pain Point

Merchants incurring expenses related to paper roll costs for invoicing are dedicating considerable time and resources to manage chargeback cases.

Solution & Pay-off:

With the implementation of UBC, the merchant could seamlessly send invoices and chargeslips with a single click, resulting in a savings of 17 lakhs in paper roll costs. Additionally, the need for dedicated resources to manage chargeback cases was eliminated, thanks to UBC's ability to provide a unified view of invoice and chargeslip information
